SIMPLE, EASY DEPLOYMENT AND MANAGEMENT

While today's IT environment has grown increasingly complex, we can help you eliminate roadblocks in adoption by leveraging Apple Business Manager (ABM).

This web-based portal helps you deploy Mac with ease. You can quickly provide employees with access to Apple services, set up device enrolment and distribute apps, books and software – all from one place.

With our help, we'll ensure your devices can be distributed directly to employees and used right out of the box. Zero-touch deployment allows you to configure and manage Mac remotely, and IT can tailor the setup process to any team. There are no worries about integration either, because whether your organisation has ten devices or ten thousand, Mac fits easily into your existing infrastructure.

This modern provisioning model is made possible because of Apple's Mobile Device Management (MDM) framework, the Apple Device Enrolment Programme (DEP) and Softcat's support. With this approach, macOS can set itself up automatically without any interaction with IT, can be easily maintained, and can be kept in-line with corporate policies.
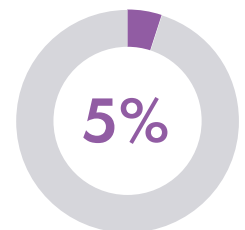

MAC, DESIGNED AROUND YOU

If you don't already use DEP, talk to us about how to get started – and how to make sure that your company's purchases will flow into your DEP account and be assigned properly to MDM. We can help you understand the options that are available and how to structure your device management policies for the best results.

Top tip:

Evaluate the different options for MDM, including solutions from JAMF, VMware and MobileIron, which support Mac in addition to iOS. Decide which features will work best for your organisation, given your infrastructure and support needs.

5%

Only 5% of macOS users ask for additional software, reducing the burden on IT teams[3]

5,400
Mac users

In a study run by IBM, just one of their engineers could support 5,400 Mac users[4]
