ORIIUM DATA ASSESSMENT SERVICE

Softcat

A one-time assessment that provides valuable insights into your most important asset: data.

HOW DOES THE SERVICE WORK?

The service is delivered by ORIIUM, who performs the setup, scanning, reporting, and presents the results to you. It is delivered using a VM appliance or a physical appliance (provided by ORIIUM for the period of the project).

The appliance scans your data sources and sends the results to ORIIUM's cloud.

ORIIUM use these to create a Softcat branded Data Assessment Report, answering some of your critical data questions such as:

- Where are my storage inefficiencies and data lifecycle issues?

- Am I meeting my compliance obligations for sensitive data?

- Are my data silos being used for the intended purpose?

- Is my data protected and are there any access risks which could be exploited?

- At what rate is my data growing?

- How much of my data is redundant, obsolete, and trivial?

- Do I have visibility of all my data? And where is my critical data located?

- Is my data recoverable?

BENEFITS TO YOU

People

We can take the difficulty of data discovery away by providing a detailed report showing what data you have, what information it contains and how it is being used.

Whatever drives your data strategy, giving you visibility of your starting point is essential to deciding on the next steps. We can either provide a generic assessment or a custom one specific to your requirements.

Platforms

Organisations struggle to fully understand and manage their growing data. Our service helps you protect your data, understand what data you hold, where it is, and who owns it.

We also ensure compliance by storing sensitive data for only the required amount of time dictated by law.

Commercial

Our Data Assessment is the first step toward gaining a deeper understanding of your data.

It can assist you in achieving cost reduction and risk mitigation for your business by improving data storage efficiency, enhancing data access control, ensuring data compliance, and optimising data utilisation.

SUITABLE FOR YOU IF...

✓ You are looking to protect and manage data.

✓ You are looking to identify redundant/obsolete/trivial data.

✓ You are migrating your data to the cloud and want to migrate only the important/useful data.

✓ You want to identify critical and sensitive data and ensure compliance.

✓ You are looking to optimise costs with effective data lifecycle management.

✓ You want to get visibility of all your data and who owns it.

WORKS WELL WITH

BaaS (Back-up as a Service)
Offering managed backup services that protect your data from all forms of data loss, including ransomware attacks, accidental deletion or corruption, enabling ease of recovery.

DRaaS (Data Recovery as a Service)
Reducing downtime and restoring your business operations quickly in the event of a crisis with disaster recovery services.

Governance Risk and Compliance
Helping you meet regulatory obligation, address key risks, and ensure your information security strategy is aligned with your business objectives.

WHAT'S INCLUDED

Data Assessment Report – You will receive a data assessment report as the main deliverable from this service.

Exported List of Files - We provide access to exported lists of files for things the customer is interested in e.g. a list of all files which were found to contain PII.

Workshop - We offer a workshop to review the report findings and offer guidance on the next steps. These steps are tailored to common issues related to data lifecycle, usage, security, and compliance. They often involve solutions like archiving, document management, application mapping, data classification, control, and monitoring.
