MANAGED VULNERABILITY ASSESSMENT SERVICE

Softcat

Allowing you to understand your exposure and minimise cyber risk. Helping you manage your vulnerabilities with a risk-based approach, using threat intelligence and machine learning.

HOW DOES THE SERVICE WORK?

We offer a risk-based vulnerability management dashboard that assesses the risk of technical CVEs (Common Vulnerabilities and Exposures). With approximately 20,000 new CVEs identified annually by security researchers, only 5-10% are typically exploited by hackers, resulting in organisations facing thousands of unpatched CVEs.

Our service promptly identifies which CVEs require prioritisation by analysing threat intelligence on their exploitation by hackers and the severity of these exploits.

Furthermore, our platform employs machine learning to predict potential future CVE exploits, enabling proactive cyber-attack prevention. In contrast to current scoring systems, which often lead to organisations dedicating excessive resources to low-risk CVEs, our service provides an efficient and effective risk assessment, eliminating wastage of time and money.

BENEFITS TO YOU

People

You can reduce the workload and headcount within your teams by removing tasks that don't mitigate risk or streamline IT security operations, giving you more resource efficiency.

Technology

Access to our risk-based vulnerability management dashboard allows you to assess the risk associated with technical CVEs (Common Vulnerabilities and Exposures).

Commercials

By taking a risk-based approach to focus resources on fixing the most critical issues, you can better manage your vulnerabilities, allowing you to measure the success of your security initiatives more accurately.

SUITABLE FOR YOU IF...

✓ You have limited resources (team/tech) to manage cyber risk.

✓ You want to efficiently prioritise vulnerabilities.

✓ You lack intelligence on your adversaries (threat actors actively targeting similar companies).

✓ You need a reporting tool to demonstrate cyber risk initiatives (budget, headcount growth, etc.).

✓ You have continued concerns about risks internally within the business.

WORKS WELL WITH

Penetration Testing

Helping to identify weaknesses in your IT infrastructure so you can take steps to fix vulnerabilities.

Managed Sentinel

Softcat's Managed Sentinel Service is a comprehensive, end-to-end security solution that helps protect organisations against threats and breaches.

Managed Detection and Response

MDR is our managed cyber security service which provides comprehensive intrusion detection of malware and malicious activity in customers' networks. It proactively monitors endpoints and devices, whether they're on-premises, in the cloud or on mobile.

WHAT'S INCLUDED

Cyber risk reporting – Overall cyber risk reporting including historical data, recommendations, and sector comparison.

Actionable intelligence – Intelligence reports on how any CVE is being exploited by hackers and actionable recommendations on mitigating risk.

Searchable database – A searchable database of CVEs, threat actors and threat categories.

Additional dashboards – Gain access to additional dashboards for third-party cyber risk management, threat intelligence, and attack surface management.
