

THREAT EXPOSURE MANAGEMENT

Providing a holistic and proactive approach to managing cyber security risks, helping you validate existing controls, stay ahead of emerging threats and vulnerabilities.

HOW DOES THE SERVICE WORK?

Our Threat Exposure Management (TEM) service is bespoke for your organisation's cyber security needs, offers comprehensive visibility, and aids in resilience. It meticulously aligns with your network, applications, and systems, targeting and accurately simulating real-world cyber threats.

The TEM service's heart lies in simulating various cyber threats covering network infiltration, endpoint, web application, email infiltration and data exfiltration. The simulations rigorously test your defences, identifying weaknesses and bolstering security measures against sophisticated attacks. Throughout the simulations, our TEM platform observes and analyses the response for your security controls, transforming data into invaluable insights. This analysis forms the cornerstone of strengthening your cyber security and improving areas of vulnerability.

Following the simulations, our detailed analysis highlights the effectiveness of your security systems, identifying vulnerabilities and guiding you through various threat responses. We then provide a prioritised action plan for remediation, addressing critical issues first, from updating protocols to patching vulnerabilities.

Our commitment to continuous improvement ensures regular threat simulations to stay ahead of evolving cyber risks and targeted staff training to enhance cyber security awareness. We ensure thorough communication to keep stakeholders informed about your cyber security advancements to deliver the best return on your investment in your security controls.

BENEFITS TO YOU

People

Taking a collaborative approach, internal teams can work closely with external experts, learning from their experiences and gaining valuable insights. This enhances team dynamics, improves cross-functional communication, and creates a united front against cyber threats.

Offloading routine tasks such as continuous validation and vulnerability assessments saves time for internal IT and security teams.

Technology

By integrating with your existing security tools, we can help validate your existing security controls and, where needed, make recommendations to improve the overall response.

Commercials

The costs associated with managing in-house cyber security tools and expertise can be significant. The CTEM service allows you to avoid hidden costs related to training, software updates, and maintaining an in-house security infrastructure, contributing to better financial predictability.

SUITABLE FOR YOU IF...

- ✓ You want to monitor, evaluate, and reduce your security risks by implementing improvement points and remediation of their security posture.
- ✓ You want improved visibility and report on threats and the evaluation of vulnerabilities for exploitability.
- ✓ You want proactive threat identification and improved remediation recommendations.
- ✓ You want incident response and recovery from incidents, as well as the ability to test following changes to infrastructure setup.
- ✓ You want resource efficiency from using a service that would require a technical role within the business.

WORKS WELL WITH

Security Baseline Assessment

Providing a 'point-in-time' look at your organisation's cyber security posture in comparison with industry best practice.

Managed Sentinel Service

Our Managed Sentinel Service combines the threat protection, security intelligence and automation of the Sentinel security platform with expert monitoring and management by Softcat's Security Operation Centre.

Managed Firewall Service

Taking on the day-to-day management of firewall infrastructure, whether it's on-premises, or in a public or private cloud.

WHAT'S INCLUDED

Platform Access - You are granted access as required over the length of the subscription, where you will have access to insights and dashboards.

Monthly Reviews - Agreed analysis and review calls are provided.

Reporting & Dashboards - Out-of-the-box and bespoke reports are provided as part of the service.

Integrations - By integrating with your existing security tools, we can help validate your existing security controls and, where needed, make recommendations to improve the overall response.

Reliability - We're on hand to manage the platform from setup and throughout the life of the service for ongoing maintenance.
