

DUO FOR ENDPOINT IMPLEMENTATION SERVICE

Implementing Duo to provide Multi Factor Authentication and Access Control protection to on-premises Microsoft Server Logons and Windows Desktop Endpoints.

HOW DOES THE SERVICE WORK?

With Softcat, you can easily integrate your Microsoft Windows Servers and Windows Desktop resources into the Duo platform. With this service, you can layer Multi Factor Authentication and Access Control Policies onto the authentication system that controls access to Windows Servers and Windows Desktops.

Our consultant will onboard up to ten Windows Endpoint and/or Windows Server devices into the environment. This will enable them to fully test the enrolment and policy application with up to 10 pilot users. This gradual, controlled approach will allow users to evaluate the service with a limited number of pilots, providing a safe and tested environment for policy application and enrolment.

After the environment has been configured, you will receive a high-level demonstration and handover documentation. You will then be ready to take full control and start utilising your environment to its full potential.

BENEFITS TO YOU

People

Duo provides an MFA experience that is familiar to end users and user-friendly, reducing the complexity and risk of implementing Multi Factor Authentication.

Technology

Cyber insurance providers overwhelmingly require that businesses have Multi Factor Authentication in place, and Duo helps meet those requirements. Duo's easy-to-use solution makes it a breeze to secure access to on-premises resources with Multi Factor Authentication.

Commercials

With Duo, you can reduce the cost and complexity associated with implementing and managing secured access to your on-premises resources. Your accounts are less likely to be compromised if you use MFA, and Duo provides a single source for MFA that's easy to use. As cloud-based security becomes more important, the lack of protection for on-premises infrastructure can leave gaps in a company's overall security posture. Duo can help reduce the risk of relying on one provider for identity protection.

SUITABLE FOR YOU IF...

- ✓ Your on-premises Windows Server infrastructure and user Windows desktop devices need better access and identity control.
- ✓ You are looking to address security vulnerabilities to comply with requirements from cyber insurance providers.
- ✓ You are looking to diversify your identity and access management platforms away from a single vendor point of failure.
- ✓ Your on-premises infrastructure needs more protection, but you don't want to deploy any more complicated and expensive infrastructure.
- ✓ You are looking to move towards a zero-trust security posture.

WORKS WELL WITH

Microsoft 365 Security Assessment Service

Providing an audit of your Microsoft 365 and Office 365 environments against industry security benchmarks.

Microsoft 365 Advisory Service

Helping you to build an efficient, secure and successful Microsoft 365 environment.

Microsoft 365 Security Essentials Implementation Service

Kick-starting your Microsoft 365 security position, aligning with industry best practice standards.

WHAT'S INCLUDED

Adapt to your needs – Configure Duo User and Group importation to suit your environment and set up adaptive policies to control access to protected applications.

Tailor-made approach – Duo User Activation methods and strategies appropriate for you.

Comprehensive solution – Configuration of Duo two-factor authentication selected services, platforms or applications.

Highest level of security – Deployment of required supporting Duo infrastructure to facilitate Duo services with the highest available security.

Review your strategy – Assistance with strategy to validate and control the roll out of Duo protection services to the wider user base.

Secure your applications with ease – Duo application protection for Microsoft Windows Logon and Remote Desktop Protocol for Desktops and Servers.
