Cyber Security Services

Reducing cyber risk with Softcat's

VULNERABILITY ASSESSMENT SERVICE

Our vision is to help you build, implement and maintain an ongoing programme to reduce cyber risk in a way that's right for your business. Our Vulnerability Assessment Service is part of a range of services we've developed to help you succeed in an ever-changing landscape.

What is the Vulnerability Assessment Service?

Our Vulnerability Assessment Service conducts vulnerability scans on behalf of your organisation, ensuring you clearly understand your organisations vulnerabilities, and makes clear as to how best remediate these through expert consultants.

How does it work?

We work with you to understand the type, number and layout of the assets requiring scanning, and onboard the relevant scanning engines to enable us to scan. We will then conduct regular monthly scans, which when completed, will be reported and emailed to you. A consultant will then set up a conference call to walk you through the scan results to discuss any questions you may have regarding the vulnerabilities, and to issue broad guidance as to how to remediate these.

KEY FACTS

- *Simple* – all operational elements of vulnerability scanning are taken care of
- *Comprehensive* – able to cover complete infrastructure estates
- *Supportive* – consultants on hand to discuss scans and answer questions
- *Clear* – easy to understand reporting with clear remediation priorities
- *Reassuring* – access to Softcat cyber security experts

What are the benefits?

Detailed reporting and support

Our service gives you access to clear and detailed reporting, helping you understand what was scanned, how vulnerable the relevant infrastructure is, and how best to prioritise remediation efforts to maximise the amount of risk mitigated. Finally should the report not answer all of your questions, consultants will be on hand to take you through the findings and answer any questions you may have.

Broad range of devices covered

Our platform has a range of scanning engines, allowing us to cover a broad range of devices, whether on premise, in the cloud, or somewhere in between, in 99% of cases we can deploy engines in one way or another, to ensure your infrastructure can be scanned fully.

Hassle free vulnerability scanning

Our service takes away all of the headaches that comes with vulnerability scanning, from choosing a technology, to deploying scan engines, to even conducting the scans; our service takes care of all of this. Simply supply the team with the relevant information to onboard and we'll take it from there.

Draw on best practice industry experience

For some organisations, conducting and remediating vulnerabilities on a regular basis can be a real challenge. Fortunately Softcat already have a wealth of experience in the security market and are best placed to advise using both the understanding of the technical, and real-world examples.

Prioritised remediations

Our reporting enables you to understand where your most significant vulnerabilities are, but also which remedial activities will mitigate the most risk. This coupled with our industry experience of deploying controls and technologies will ensure you are best placed to implement real world remediations.

WHY SOFTCAT

- Consultant-supported assessment – understand your current vulnerabilities with clear guidance
- Tried and trusted security process – experienced methodology
- Measured against best practice – ensure you're fully secure
- Clear get-well reports – make improvements quickly
- Low cost, flexible process to allow timely achievement of objectives
