

CLOUD HEALTH CHECK SERVICE

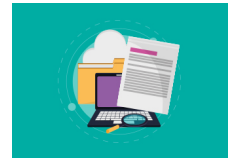

Overview

If you've already embarked upon your cloud journey, Softcat can make sure that you're getting the most out of your chosen platform. Our Cloud Health Check is for customers that would like an overview assessment of their cloud deployment delivered by a cloud expert. The service results in a detailed report focusing on the design topology, security, and consumed services with a plan for remedial action.

Assessment and report

We provide an overview of your organisation's cloud set up, covering: networking, security, applications, service levels, compliance, connectivity, cost efficiency and more, presented back in a clear report.

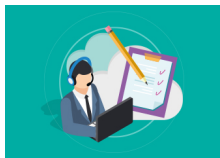

Best practice recommendations

We identify quick wins, areas of risk and take time to discuss any larger areas of improvement in line with current industry best practices.

Visual overview of your architecture

We will provide a visual representation of your cloud architecture allowing you to see your cloud services in one place and present where our recommendations add value.

Ongoing reviews

We offer ongoing reviews so your cloud environment continues to function in an optimal state and that you can realise any benefits quicker, as your usage develops and evolves.

Why Softcat for Cloud Health Check?

Softcat's Cloud Health Check provides assurance from a dedicated UK-based team of experts who are highly experienced in a breadth of cloud platforms. Our range of cloud services and on-premises infrastructure, coupled with our dedication to customer experience, ensures you have a trusted partner committed to your cloud transformation.
