

DATA CENTRE

Solution overview

An efficient and available datacentre is integral to delivering a service level that meets the expectations of internal and external customers. From infrastructure provision to third-party services, virtualisation to DCIM, our datacentre management team builds comprehensive server, storage, and networking solutions for organisations of all sizes. In doing so we can leverage the ever-changing capabilities from on-premise and public cloud platforms, in addition to complimentary 3rd party services.

Why Softcat for Datacentre?

We're technology agnostic, working with the industry's biggest partners. This means we offer a truly independent, holistic service that's tailored to the unique needs of each business we work with.

Our approach is deeply consultative, focussed on identifying and overcoming the challenges our customers face. Our multiple-award winning team has more than 80 years combined experience helping businesses large, medium and small with their data management.

Datacentre services

Infrastructure

Leveraging extensive experience across server, storage and virtual environments, our Infrastructure team build the datacentre skeleton.

We provide cost-effective, efficient and resilient architecture along with data storage solutions that support business growth.

Business Intelligence

Our Business Intelligence team understand how important the bigger picture is. Using a wide range of tools we deliver complete data visibility, providing commercially impactful insight that fuels better decision-making.

Networking

Our Networking specialists ensure every datacentre component connects to everything else as efficiently and effectively as possible.

From monitoring to backup to security, our networking solutions deliver a streamlined and uninterrupted experience.

End User Computing & Mobility

Technology should start and end with user experience.

Taking an innovative user-down approach, our End User Computing & Mobility team make sure users can do what they need to do, when they need to do it. Our EUC specialists deliver improved productivity, better collaboration and an enhanced user experience.

Connectivity

From monitoring to management to server hosting, we offer a suite of diverse connectivity solutions suited to businesses of all types.

With services including MPLS/VPLS, VPN, ADSL, SDSL and Ethernet services, our Connectivity experts enable outstanding, reliable and secure network performance.
