

# ASSET MANAGEMENT

## Solution overview

Asset management enables organisations to control their complete IT portfolio. Good governance drives efficient procurement decisions, offering an accurate understanding of what they have and what they need, and reducing the risk of underspending or overspending. It also provides compliance and clarity around terms and conditions. Our specialists appreciate that effective asset management is key to the success of any IT department.

## Why Softcat for Asset management?

Our well-established asset management division services hundreds of customers every year. We launched a fully managed service 12 months ago, which is proving understandably popular. Leveraging a hosted platform, this dynamic service provides an accurate picture of your technology portfolio, offering IT systems management whilst liberating your internal resources, allowing more effective operations.

## Asset management services

### Hosted Solutions

For customers who prefer to outsource their infrastructure requirements, we host IT asset management software in our own datacentre.

Customers are liberated from providing underlying servers for their software as we take full responsibility for all upgrades, uptime and technical support. This approach results in substantial customer savings in terms of time, money and internal resources.

### Complete Licensing Management

We offer a complete licensing management service so customers can specify the vendors they prefer and we'll manage all licensing on their behalf.

This proactive service brings with it a number of benefits, including compliance, license re-harvesting and in-depth reports on risk and underused software. Visibility of the licensing estate and the maintenance of license entitlement are also enhanced.

### License Position Optimisation

Point-in-time analysis of a customer's licensing position allows us to provide precise information about their requirements and tailor our recommendations accordingly.

Identifying risks or areas of under- and over-licensing optimises infrastructure and licensing, as well as helping maintain compliance.
