

END USER COMPUTING & MOBILITY

Solution overview

Teams are more productive when they have simple and secure access to the applications, data, personal settings and collaboration tools they need. Our specialists help organisations efficiently employ and optimise their technology, so they can operate as effectively and securely as possible. Technology should be an aid, not a barrier.

Why Softcat for End User Computing & Mobility?

Our award winning End User Computing & Mobility team specialise in people-centric computing. We design, deploy, supply and support the End User Computing & Mobility ecosystem that delivers to desired organisational outcomes. We help organisations ask the right questions, in order to quickly identify the right solution. Then we painlessly and pragmatically test the resulting blend of technology, to offer mobile data management or other solutions that deliver optimum results.

Proven, Personalised Service

Top-Tier Accreditations

Top Customer Priority

End User Computing & Mobility services

Secure Access

Secure access means protecting and empowering users.

Our End User Computing & Mobility specialists ensure organisations can access the applications, information and collaboration tools they need to be effective, without compromising on data security.

Profile Management & Personalisation

Solutions are automatically configured to be contextually relevant, ensuring tools and programmes are instantly recognisable and usable.

Profile management & personalisation improves the user experience by ensuring fast logon times to any Windows platform, and eliminates profile corruption.

Secure File Share & Synchronisation

Secure file sharing helps businesses maximise productivity by allowing users to access, share and synchronise files on any device, without compromising security.

Our End User Computing specialists ensure users have secure and remote access to the data they need, whenever and wherever they need it.

Automated Onboarding & Offboarding

Trigger immediate procedures to enable or terminate access to IT services on-demand. Automated onboarding shortens time to effectiveness for new hires, while automated offboarding mitigates the security and compliance threat of manual procedures.

Application Virtualisation Platforms

Application virtualisation platforms liberate applications from dedicated workstations, allowing them to function on-demand.

Users are able to access applications and server desktops from any device, working in the most convenient and effective way.

Privilege Management

Businesses need to dynamically allocate and deallocate user authorisation on a case-by-case basis, retaining full control.

Privilege management ensures businesses are protected, removing the threatening accumulation of privileges over time as users change roles.

Enterprise Mobility Management

Enterprise Mobility Management enables and secures users to work on personal or corporate mobile devices.

Secure, enroll and integrate smartphones and tablets, maximising employee productivity while protecting data.

Self-Service IT Stores

Access business-critical technology quickly and easily.

Automate the delivery of IT services and applications through a lightweight self-service store that integrates effortlessly with existing investments.
