

NETWORKING & SECURITY

Solution overview

Fast, secure networks allow staff to work efficiently and securely, allowing your organisation to keep customers happy and avoid costly security breaches. The right network security solutions enable organisations to plan ahead and build in capability for increasing data volumes and mobility demands, facilitating a fast and reliable service to users, customers and partners.

Why Softcat for Networking & security?

Our market-leading team of experts can consult and design bespoke network and security systems for every type of customer, covering both on premise and Cloud Managed Services. The breadth and depth of our combined expertise allows us to deliver a robust end-to-end service from project inception to network security installation through to completion. Softcat's unparalleled portfolio of partners and technologies, combined with our unrivalled knowledge of the ever-evolving Networking and Security market, ensures that your organisation will benefit from innovative solutions fit for both the challenges presented by today's environment and scale to meet future demands.

Networking & security services

Managed Security Services

Fully managed security services with 24/7 support, enabling customers to focus their IT department on managing core systems.

We understand that our customers may not have the capacity or experience to manage new or existing security services. Softcat security services are fully managed and supported 24/7, so customers have total peace-of-mind and can focus their energies elsewhere.

Support Services

Avoid unnecessary confusion and conflict by consolidating multiple support contracts.

Managing multiple networking and security contracts can cause problems and be unnecessarily complex. Softcat can look to reduce this support to a single consolidated contract with one partner, ensuring streamlined support services without lapse of contracts.

Cyber Security Services and Threat Assessment

Information and cyber security is a strategic imperative for organisations of all sizes.

Our security assessment and testing services help customers to understand how cyber secure they are, what vulnerabilities and risks exist in their security posture and what steps they need to take to become more cyber resilient.

Networking Solutions

Our experienced architects help organisations develop networks that are tailored to their long-term goals.

Softcat's award-winning Networking and Security team help organisations define their long-term strategy around Wireless, Edge, Core, Datacentre, Networking and Load Balancing.

Managed Networking Services

Our managed networking services relieve the strain of continual network management, monitoring and updating.

Softcat recognise the pressure that network management can put on our customers' IT department. We alleviate that pressure, taking control of day-to-day network management in order to increase availability and reduce downtime.

Professional Services

Our 150-strong services team provide complete project coverage to de-risk project delivery and meet customer timelines.

Our project teams are made up of dedicated Pre-Sales Specialists, Solutions Architects, Technical Architects, Project Managers and Implementation Engineers. We offer end-to-end project coverage from initial workshop to post-implementation training, hand-over and project sign-off, empowering us to deliver efficiently and effectively.

Security Solutions

Our specialists help organisations navigate the complex and fast-paced IT security market, offering a full roster of security solutions to help mitigate risk.

We cover the traditional areas of Firewall, Email Security, Web Security, Security Information and Event Management, Data Leak Prevention, Cyber Threat Prevention, Identity Management, Authentication, End Point Security, as well as numerous other solutions.
