

# CISCO ONE SOFTWARE

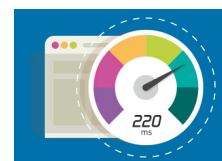

## Overview

The Cisco ONE Software suite offers additional functionality for those organisations that need Cisco's advanced networking features. The suites are flexible, with a choice of licensing options, and provide access to updates, upgrades and new technology. Removing the complexity of purchasing separate licenses, Cisco ONE Software provides a single, flexible licensing model to help you extract maximum value from the investment you've made in your network and provides a single portal through which you can access all of your perpetual licences and subscriptions. As the licences aren't device-specific you don't need to re-purchase the software component when you refresh your hardware, reducing the future cost of technology updates.

## Cisco software and hardware

Coupling Cisco ONE Software with Cisco hardware creates a highly secure and efficient network. Designed for datacentre, WAN and Access, Cisco ONE Software is flexible and scalable, making it simpler and easier to buy, manage and upgrade your infrastructure software. Whether it's wired or wireless access, a secure datacentre network or enabling smooth voice and video collaboration, we'll help you to define the approach that suits your organisation's priorities.

## Software support

Cisco's proactive software support gives you access to updates, upgrades and new capabilities. With access to the latest tools and resources as well as the deepest levels of technical support, Cisco ONE Software ensures your network is up-to-date and secure. You'll be supported 24/7 by the Softcat Ops Centres, with the comfort of our direct escalation path into Cisco's Technical Assistance Centre (TAC) should you ever need.

## Flexible licensing

There are a range of options for licensing - perpetual, subscription, or enterprise agreement. Each option suits a different range of business and organisational priorities; our expert team will help you to select the most appropriate option. For customers 'all in' on Cisco, the enterprise agreement option is a flexible and simple way to get access to Cisco ONE Software. The major benefit is the opportunity to co-terminate all of your licenses, making it easy to manage over a longer-term agreement.

## Why Softcat for Cisco ONE Software?

With over 25 years of software lifecycle management experience, Softcat's engineers, architects and consultants provide comprehensive end-to-end support for Cisco ONE Software. We will help you to ensure that you are maximising the full benefits of your Software through our adoption and lifecycle practice.
